Adding an assessment Fig 5

Task1: Design GUI of Student, Teacher and Examiner, show dummy data on their interfaces.

Task2: Implement Login Module for SGS, all actors must be logged into system and forwarded to their respective main screens.

Lab Tasks:

In this lab, you have to develop a small interactive game named “Catch the bone”. There will be a character image at the center bottom of the screen which is waiting for a bone coming from top of the screen from random location one by one. Bone will collide with left and right wall till it reaches the character which has to catch it to get points. Once the bone is missed, game will be over. Perform following tasks in this lab activity

Task 1

Design/Acquire proper images of bone and character and attach them with controls on screen

Task 2

Drop bone from random location also set random direction of bone i.e. DOWN_RIGHT or DOWN_LEFT.

Task 3:

Increase the speed of bone after each catch by a factor.

Task 4:

Display total score at the end of the game.
